

T28

Industries are sorted by growth descendingly (Figure 1). Industries that saw the most growth are Consumer Products and Services, IT Services, Health...

Companies that have been on this list have the ‘years on the list’ variable bigger than 1. Companies not fulfilling this condition have been filtered out. Companies with the highest revenue or with the highest growth have not necessarily been on the list the longest (Figures 2, 3, 4). However, high revenue increases the chance of being in the Top 5000 (Figure 5), while high growth decreases it (Figure 6). Companies that have been on the list the longest are not guaranteed to appear again. Generally, there is a negative correlation between the number of workers in the company and growth (Figure 7). Most IT companies are found in California (Figure 8). Cities that have seen the most growth are El Segundo, New York, Arlington... (Figure 9).
